This event is FREE to attend | hot breakfast provided

Virtualisation and Systems Storage Essentials Breakfast Seminar

Today's businesses require ever **increasing volumes of data** to be retained and managed for operational and compliance reasons. Tighter budgets also create unrelenting pressure to **do more with less**. Consolidation of IT infrastructure through server virtualisation and shared storage systems is the path that most businesses take to **overcome these challenges**. **Experts from IBM and VMware** will provide an insight into these solutions and help you discover:

- How Virtualisation helps to reduce IT costs while increasing the efficiency, utilisation and flexibility of server hardware.
- The advantages of implementing shared data storage
- What is the best Storage solution for your organisation and how to assess your requirements
- What tangible results have been achieved by companies who have implemented these solutions
